InsightHQ was upgraded to V.4.5.0 on
October 20th 2024 UTC.

Enhancement

The October 20th update includes a refresh of the icons we use in the 'Mobile Equipment' widget available for display on Home's dashboard.

We have updated the existing icons representing Haul Trucks, Wheel Loaders, and Excavators....and introduced a new icon to represent Processing Equipment.

As part of the changes, we have decided to temporarily disable the display of the measured payload information. This is just temporary while we work on a new way to display the weights.
